Profiles: LinkedIn GitHub X.com

SUMMARY

Full-Stack Developer with expertise in React, Next.js, Node.js, and Express, focused on building scalable and high-performance web applications. My background in Web Penetration Testing and HackerOne research allows me to write secure, production-ready code from day one. Passionate about developing clean, efficient software that prioritizes both user experience and security.

EXPERIENCE

Bytex — Frontend Developer

Lebanon | 7 Months

Website: bytex-lb.com

- Built responsive, accessible, and high-performance web applications using React.js and Next.js.
- Contributed to multiple projects, delivering user-facing features and improving frontend maintainability.
- Developed reusable React components and Next.js pages, applying best practices for state management and routing.
- Improved client-side performance through code splitting, lazy loading, and asset optimization.
- Integrated REST APIs and implemented robust form validation and error handling.
- Collaborated with designers and backend engineers in Agile sprints, participating in code reviews and CI/CD processes.

PROJECTS

DevFlow — Next.js Community Application

2 Months

Live: dev-flow-4o5y.vercel.app

- **Server-Side Logic:** Extensive use of Next.js Server Actions for handling data mutations and form submissions.
- **Database Management:** Designed a scalable schema in MongoDB to handle users, questions, answers, tags, and interactions.
- **Authentication & Security:** Integrated Clerk for secure user management and protected routes.
- **Dynamic UI:** Created a responsive, dark-mode-ready interface using Tailwind CSS and Shadcn/UI components.

Litco Marble — Full-Stack Web Application

3 Months

Live: litco-website.vercel.app

- **Performance & SEO:** Leveraged Next.js for optimized loading speeds and improved search engine visibility.
- **Dynamic Routing:** Implemented a structured gallery system with dedicated pages for different marble types (Statuario, Calacatta, Bianco).
- **UI/UX:** Designed a clean, luxury-focused interface using Tailwind CSS, ensuring a seamless experience across all device types.
- **Global Architecture:** Integrated multi-regional contact information and localized project highlights.

Azalea — Full-Stack E-commerce Web App

2 Months

Live: azalea-website-lake.vercel.app

- **Frontend:** Next.js & TypeScript for a type-safe, scalable user interface.
- **Backend/CMS:** Sanity.io used as a Headless CMS for flexible content modeling and real-time data fetching.
- **Performance:** Optimized image delivery using Next/Image to ensure fast load times despite high-resolution product photography.
- **UI/UX:** Custom-themed design emphasizing luxury branding, featuring smooth transitions and intuitive navigation.

MO Media — High-Performance Agency Hub

Live: momedialb.com

- **UI/UX Excellence:** Implemented a minimalist, high-impact design focusing on visual storytelling and clear service hierarchies.
- **Performance Optimization:** Leveraged modern frontend practices to ensure lightning-fast load times and smooth transitions across all devices.
- **Scalable Architecture:** Structured the platform to handle diverse service categories—ranging from software development to creative media—with ease.
- **Lead Generation:** Integrated optimized contact flows to streamline B2B inquiries.

SKILLS

Experienced: Next.js

Skilled: React.js, TypeScript, Tailwind CSS, Sanity CMS, Express, Node.js, CSS, HTML, OWASP Top 10, MongoDB, Mongoose, JavaScript, C++
